# Compuware Offers Industryâ€™s First Free IPv6 Website Performance Comparison Test

Free Online Tool Compares Performance of IPv4- and IPv6-Enabled Web Applications

Compuware Corporation (NASDAQ: CPWR), the technology performance company, today announced that – in recognition of World IPv6 day <http://www.worldipv6day.org/> – it has released the industry’s first free IPv6 Website Performance Comparison Test <http://bit.ly/kSAiWN> . This test allows organisations to compare the speed of their IPv4- and IPv6-enabled web applications. The free Compuware Gomez IPv6 Website Performance Comparison Test <http://bit.ly/kSAiWN> is available here <http://bit.ly/kSAiWN> .

With Internet Protocol IPv4 addresses running out this year <http://www.worldipv6day.org/> , the industry must act quickly to prepare for IPv6 adoption or risk increased costs and limited functionality online for Internet users everywhere. With the migration to IPv6 already underway, it’s critical that organisations ensure their IPv6-enabled applications perform on par with their customers’ user experience expectations. Compuware’s early analysis of IPv6-enabled sites shows that users generally experience slower responses times when accessing them.

To use the Gomez IPv6 Website Performance Comparison Test <http://bit.ly/kSAiWN> the user submits URLs for IPv4- and IPv6-enabled websites. The test produces a waterfall chart that compares the response times of each of the sites and also shows a screen capture of the IPv6 and IPv4 pages as they are seen in an actual browser.

“IPv6 will play an important role in the future of the Internet, and until now there was no way to test the performance of IPv6-ready websites or compare them to the currently deployed IPv4 sites,” said Steve Tack, Chief Technology Officer of Compuware APM business unit. “This instant test provides a quick and simple way to measure the response times that a user experiences when using these two protocols and helps ensure organisations experience a smooth and successful transition to IPv6.”

The Gomez IPv6 Website Performance Comparison Test is available at: http://bit.ly/kSAiWN

The Gomez platform <http://www.compuware.com/application-performance-management/the-gomez-platform.html> is the industry’s leading solution for optimising the performance of web, non-web, mobile, streaming and cloud applications. Driven by end-user experience <http://www.compuware.com/application-performance-management/end-user-experience-synthetic-monitoring.html> , Gomez provides a unified view across the entire application delivery chain <http://www.compuware.com/application-performance-management/what-makes-gomez-unique.html#unify> , from a user’s browser or mobile device, across the Internet or a corporate WAN, in the cloud, to inside the data centre, eliminating blind spots from the First Mile <http://www.compuware.com/application-performance-management/first-mile.html> to the Last Mile <http://www.compuware.com/application-performance-management/last-mile.html> .
