Director Darren Johannessen and expert Solar Consultants, Peter Hutchinson & Richard Bragg enthusiastically speak about Regency's latest product; the PowerRouter. With Regency Solars new PowerRouter it not only makes your home energy self-sufficient (even off grid) but also reduces household running costs and your carbon footprint. This compact, all-in-one system is the next generation in solar inverters with online monitoring capabilities that allow you to be in control of your power management.
'We will not sleep until all Australian households have the tools to be 100% energy independent of the grid in a cost effective manner,' says Johannesen. 'Our vision has always been to give Australians the power to be in control of their own energy and be grid independent. With this new product our dream is now a reality.'
Regency Solar's initial outlook to enter the solar market was to be able to offer the average home the ability to be grid independent through the use of solar power. At the beginning this was not entirely possible with off grid systems being unviable for the domestic market. With the introduction of the PowerRouter, the company can now realise their goal of being able to offer Australians an affordable long term solution to becoming energy independent.
'This system is extremely useful in rural settings, ' exclaims Johannesen. 'For regional areas where black outs and brown outs are a frequent occurrence, the PowerRouter can help with uninterrupted power supply through battery management.'
The PowerRouter is a sustainable system, helping you to make a real change in the world. You generate your own energy, and put it to its best use. Anytime and anywhere. Renewable energy is at the very core of the whole PowerRouter philosophy. The PowerRouter can also help you save money, as you never have to be dependent on energy providers and fluctuating prices again.
The PowerRouter converts energy from any power source and directs it to where it is needed, when it is needed, Just connect any source of energy to the PowerRouter, and monitor and control where and when you use it. Solar, wind or battery power: the PowerRouter allows you to optimize, control and manage your self-generated energy. It also routes your energy in an intelligent way. If you produce more energy than youre using at that time, you can store your energy in batteries for later use and feed the surplus into the grid. This results in optimisation of up to 70%.
The PowerRouter has been designed from a totally integrated perspective. With todays requirements and future development in mind, the hardware and software for the PowerRouters system was created in a way that allows you to adapt it to future changes in energy sources and regulations. Expanding the system with batteries for back up or optimising your use of self-generated solar can do this. You can select the best option for you. Your system can be tailored in the way that fits your own situation.
Regency Solar is a wholly owned Australian company, part of the Regency Media Group founded in 1986. Regency Solar is leading provider of premium Domestic Solar PV systems and is the sole distributor of Canadian solar Brand Day4 Energy.
