

Audio Visual and Video Conferencing Central to Tomorrows Leaders in Business, Education and Government

[ELECTROBOARD Technology Showcase Attracts Record Crowds as it Sets the Scene for Next 12 Months in Australia](#)

Sony and Epson will lead an impressive line-up of audio visual (AV) and conferencing vendors previewing next generation technologies in front of more than 600 visitors at the ELECTROBOARD AV and Video Conferencing Showcase this week.

Hosted in ELECTROBOARD'S Melbourne office on Wednesday and Thursday (24th and 25th August 2005), a total of 23 exhibitors will converge to display the latest AV and video conferencing technologies and trends that can be expected in Australia over the next six to twelve months.

Warren Bolton, managing director, ELECTROBOARD said the response from visitors in fields as diverse as business, education and government departments has been massive, reflecting the increased role AV and video conferencing is having in Australian businesses.

The ELECTROBOARD Showcase is unique in bringing leaders in AV and video conferencing like Epson, Sony and Command under the one roof. Boardroom communications such as video over IP, digital signage and plasma are becoming a critical part of modern business as local customers become national, and national markets turn global.

ELECTROBOARD is bringing this all together for a comprehensive look at what's available, and what's around the corner, in AV and video conferencing, he said.

Bolton concluded, This is one of the fastest changing and fastest growing IT spaces in Australia and as hosts, ELECTROBOARD is committed to making this exciting Showcase an annual, milestone event.

About ELECTROBOARD
