

BT Selects CommVault Simpana Software to Help Transform Data Management and Reduce Operational Costs

“Global Leader of Voice, Data, Internet and Managed Services Offerings Adopts Simpana Software Backup and Recovery with Deduplication to Help Deliver Next-Generation Services to Customers”

CommVault (NASDAQ: CVLT) OCEANPORT, NJ April 21, 2010

News Facts

BT, one of the worlds largest communication companies with an integrated group of businesses that provide voice and data services throughout the UK and globally, has selected CommVault Simpana software as part of its continuing effort to reduce costs and improve service levels for its internal and external customers.

CommVault is partnering with HP to accelerate Simpana software deployment as part of a five-year agreement to assist BT in transforming its data management through increased adoption of data center virtualization and tiered storage solutions.

BT will implement the Simpana Backup & Recovery module with centralized management and policy automation to expedite disk-based backups and drive significant operational efficiencies. With Simpana software, the company gains a more flexible, scalable solution which BT expects will deliver greater management visibility for better control of its massive environment, which includes more than 6 PBs of data and a large-scale Oracle deployment.

According to BT, the Simpana Deduplication feature will help decrease redundant data across disk storage, enabling further reductions in capacity requirements and capital expenditures.

CommVaults Singular Platform Eases Data Management, Lowers Costs

With Simpana software, BT is able to reduce operating costs by employing a modern, singular approach to data and information management which reduces operational, administrative and infrastructure costs. CommVault Simpana software modules share a common set of back-end services and advanced capabilities that effortlessly "talk" to one another through the common platform.

Simpana software modules common, singular platform eases deployment and ongoing management of BTs complex environment.

Simpana software also works seamlessly with BTs Oracle systems and administrative processes, which were major considerations as the company supports massive, mission-critical Oracle databases. Simpana software is designed to streamline Oracle data management with Oracle RMAN integration to speed and simplify backup and recovery performance, providing users with real-time, secure access to business critical data.

CommVault Simpana software has been optimized to support a managed services model. With Simpana software, BT can leverage Simpana software to support external clients interested in cloud storage services.

CommVaults hardware-agnostic software lets customers avoid vendor lock-in. For BT, this was an important selection criterion as the company sought economical, commodity disk hardware to further reduce costs.

Supporting Quotes

From Stan Sexton, Director, Global IT Services Centre of Excellence, BT:

Our primary goal within BT Innovate and Design is to continue to identify, design and implement solutions that further enhance the capabilities of BTs virtualized data center services. CommVaults Simpana software will be used to simplify and automate our storage backup and restore service, while delivering reduced costs and a significantly improved customer experience.

From Colin Lilburn, Head IT Technical Services, BT Operate:

As one of our integrated businesses, BT Operate deploys and runs communications services for customers over BT's core network and systems. To that end, BT Operate is transforming the way we provide these IT services by increasing standardization and automation in our infrastructure operations. CommVault Simpana software will be key in enabling the acceleration of this transformation.

About CommVault

A singular vision—a belief in a better way to address current and future data and information management needs—guides CommVault in the development of Singular Information Management solutions for high-performance data protection, universal availability and simplified management of data on complex storage networks. CommVault's exclusive single-platform architecture gives companies unprecedented control over data growth, costs and risk. CommVault's Simpana software modules were designed to work together seamlessly from the ground up, sharing a single code and common function set, to deliver superlative Data Backup, Archive, Replication, Search and Resource Management capabilities. More companies every day join those who have discovered the unparalleled efficiency, performance, reliability, and control only CommVault can offer. Information about CommVault is available at www.commvault.com. CommVault's corporate headquarters is located in Oceanport, New Jersey in the United States.

About BT

BT is one of the world's leading providers of communications solutions and services operating in 170 countries. Its principal activities include the provision of networked IT services globally; local, national and international telecommunications services to our customers for use at home, at work and on the move; broadband and internet products and services and converged fixed/mobile products and services. BT consists principally of four lines of business: BT Global Services, Openreach, BT Retail and BT Wholesale. In the year ended 31 March 2009, BT Group's revenue was 21,390 million. British Telecommunications plc (BT) is a wholly-owned subsidiary of BT Group plc and encompasses virtually all businesses and assets of the BT Group. BT Group plc is listed on stock exchanges in London and New York. For more information, visit www.bt.com/aboutbt
