Building a stronger future for the South Coast

McDonald Jones Homes, the number one project home builder in New South Wales, has opened a first-class service facility in Oak Flats. The new facility will give new home owners on the South Coast greater access to use roofing made from COLORBOND steel and framing made from TRUECORE steel.

As the largest project home builder in the state, building over 750 homes each year, McDonald Jones Homes has witnessed the continued growth of the Wollongong and Illawarra area. With display homes already located in Illawarra and Nowra, the new Oak Flats office and selection centre will assist project home owners in selecting the right materials and products for their new home.

On opening the new facility, Gary Butler, McDonald Jones Homes General Manager Southern Region, said:

“The decision to open a new office and selection centre in Oak Flats is evidence of McDonald Jones Homes’ long term commitment and faith in the South Coast. We are proud to offer project home owners access to facilities and products, such as COLORBOND steel and TRUECORE steel, which were previously only offered to Sydney residents.”

For over 25 years, McDonald Jones Homes have continued to satisfy customer expectations for quality housing and value for money in the residential market. As an early adopter of lightweight steel construction, McDonald Jones Homes have teamed with BlueScope Steel to offer roofing made from COLORBOND steel and framing made from TRUECORE steel as the preferred standard for new home builds for almost a decade.

For further information on BlueScope Steel products call 1800 022 999 or visit www.colorbond.com or www.truecore.com.au
