

# Carestream Health Now Taking Orders for DRX-Mobile Retrofit Kit

Kit Will Convert Existing Mobile X-Ray Systems to Wireless DR Technology, Saving Time and Improving Patient Care

ROCHESTER, N.Y., March 24 Carestream

Health announced it is taking orders for its CARESTREAM DRX-Mobile Retrofit Kit that will allow healthcare providers to upgrade selected mobile x-ray systems to wireless DRX-1 technology. This wireless DR system can help increase on-site productivity and deliver immediate access to images for improved patient care, especially for critically ill patients in emergency rooms, operating rooms and the ICU. The company is taking orders for the retrofit kit in countries where it has regulatory approval. The system will be available this summer.

The DRX-Mobile Retrofit Kit can be installed quickly and is powered by Carestream Health's highly successful DRX-1 detector. The cassette-size detectors' wireless capabilities allow users to capture and view images in seconds at the point of patient care. Medical images can be forwarded to multiple network destinations, so clinicians can make a rapid diagnosis and begin immediate treatment. This wireless workflow improves patient care and boosts staff productivity. CR-based mobile systems require technologists to travel to a centralized CR reader for image processing, which creates a cumbersome workflow that delays image access.

Use of the DRX-1 technology also improves patient positioning and comfort by eliminating cables and tethers typically required by most DR-based systems. This makes it ideal for confined spaces, remote locations and imaging of patients with limited mobility in addition to emergency rooms, operating rooms and the ICU.

Integration  
with Leading Mobile X-Ray Systems

The retrofit kit will be integrated with the following mobile x-ray systems and retrofit kits for additional mobile systems are in development:

GE AMX-4

GE AMX-4 Plus

Siemens Mobilett Plus

Siemens  
Mobilett XP and

Siemens  
Mobilett XP Hybrid.

To support the imaging needs of ICU departments, Carestream Health offers innovative software that uses the original exposure to display an enhanced image with more precise visualization of lines and tubes, which are typically difficult to view.

Carestream Healths DRX-1 detector forms the foundation for a highly productive family of DR products including the DRX-1 system that can convert analog x-ray rooms to DR technology in less than one day and a fully automated DRX-Evolution suite that offers virtually unlimited patient positioning. In addition, the company offers a broad portfolio of CR and DR systems that equips hospitals, outpatient imaging centers, orthopedic practices and other healthcare providers with digital image capture for x-ray exams.
