

## Clearswift to host email security managed service

MIMESweeper Email Managed Service filters and manages email for all sizes of organisation. It provides comprehensive defence against spam, viruses, spyware, phishing and denial of service attacks. With no hardware or software to install it is easy to use, manage and maintain.

The new service takes the burden of email security away from overworked IT teams. The MIMESweeper Email Managed Service combines the rigour of the Clearswift MIMESweeper product portfolio with expert hosted management and implementation.

IT departments are under immense pressure to provide fast, affordable and efficient content security, while meeting tougher compliance and corporate governance standards, according to Peter Croft, managing director Clearswift Asia Pacific.

With MIMESweeper Email Managed Service, customers can leave their email security to Clearswift, he said.

Key features of MIMESweeper Email Managed Service include:

Effortless email security no software, hardware or maintenance

24x7 hosting offering complete physical security, software resilience and support with 99.999% availability

Eliminates 98% of spam with less than 1 in 300,000 false positives

Every email message, inbound or outbound, thoroughly checked by best-of-breed anti-spam, anti-virus and content security technologies before being released with the minimum delay.

MIMESweeper Email Managed Service also incorporates market-leading external and internal email archiving, and a full audit trail to meet exacting corporate governance standards. Unlike many competing services, no extra hardware or software is required for the archiving functionality.

Additional features are:

Multi-layered anti-spam defences including mass outbreak detection, multiple configurations for Dark Mail protection and silent rejection of Dark Mail (spam sent to guessed email addresses)\*

Real-time dual location replication of static and transient data to ensure no loss of email

Multiple virus filters for maximum protection

Filtering of all inbound and outbound traffic

Dedicated image filter to eliminate distasteful material

Powerful and flexible rules-based engine that enables organisations to manage and deploy multiple compound rules

Full archiving to support compliance and business continuity

Secure encrypted email between participating parties

Total visibility, with web-based logging, reporting, audit and control

Allows delegation of certain functions so users can manage their own quarantines, image and audit logs

Uses a combination of heuristics and real-time analysis of internet activity and propagation rates to protect against past and real-time malicious activity

Zero end user disruption

Advanced graphical reporting and message tracking

\*Dark Mail makes up about 40% of email traffic. Most managed services can reject Dark Mail but actually give the spammers confirmation of valid addresses. Uniquely MIMESweeper Email Managed Service silently rejects these messages so that the spammers don't get any useful information.

About Clearswift

Clearswift, The MIMESweeper Company, is the world's leading provider of content security software for email and web. Clearswift secures content and protects against digital attacks by enforcing security policies that increase productivity, reduce IT costs and create a safer business environment.

Clearswift enables organisations to protect themselves against digital attacks, meet legal and regulatory requirements, implement productivity-saving policies and manage intellectual property passing through their network.

Clearswift's portfolio includes MIMESweeper, the world's most advanced content security solutions, as well as a range of specialised security solutions for the most security conscious environments.

Clearswift has 15,000 customers and over 20 million end-users worldwide. It has offices in the US, UK, Germany, Sweden, Japan and Australia.
