

Galvin

Engineering a leading Australian manufacture of specialist commercial tapware has launched the innovative CliniLever tapware range designed to reliably meet the demands of hospital and aged care facilities. With healthcare facilities facing cost pressures and high usage demand, Galvin Engineering understood the importance of providing reliable sustainable products that reduce costs for hospitals long term whilst supporting infection control programs. Australian designed and manufactured, the New CliniLever Tapware range includes unique option of front -of-wall isolation in the tap; providing maintenance with a practical quicker way to shut down each tap for maintenance. Building in features that incorporate sustainability in our designs provides architects and specifiers with the confidence that they can provide their healthcare clients with the latest in tapware solution that will lower their whole-of-life cost. The new CliniLever range with its smooth flowing design provides a modern range that covers all requirements including surgical, basin, sink, shower sets and associated fixtures with options of 80 or 150 mm handles, ceramic or jumper valve designs.
