

# Don't wait even one minute to render your home movies

Snazzi III AV-DV captures from digital or analog cameras, allows burning to disk as soon as editing is finished

Film editors no longer need to wait hours for their creations to render, as ByteZone announces the availability of the Snazzi III AV-DV Evo edition. The video capture card includes its own processors to relieve the PC from the task of rendering video. The result is that as soon as you finish editing you can create a finished version of the movie to burn onto CD or DVD, and save hours in post-production time compared to other video capture devices.

The PCI card allows capture of digital and analogue video via an array of ports, including 2 x IEEE1394 Firewire ports, 2 x composite video ports and 1 x S-video port. Video can be output to a variety of digital formats, MPEG-2, MPEG-1, AVI, ASF, WMV and output to file, DVD, SVCD, VCD or back to DV camera.

The device ships with all the software needed to capture, edit and export a movie to a CD or DVD, including:

Snazzi MovieMill for analogue capture and Snazzi DV Studio for DV capture and output to DV

Muvee Autoproducer to automate editing using pre-defined editing styles and themes

Winproducer 3 DVD, an intuitive editing suite ideal for new users which outputs to almost any format or medium

Ulead Media Studio Pro 6.5 professional non-linear video editing software

Movie Factory 2.0 which offers DVD authoring tools and templates

The Snazzi III AV DV Evo edition costs just \$695.00 and is on sale now at [www.bytezone.com.au](http://www.bytezone.com.au)
