

Eden Technology and Forensic Data Recovery Inc join forces to bring world-class computer forensics training to Australia

Eden Technology a privately held Australian software company specialising in IT solutions and related services for defence, maritime, law enforcement, security and asset management announced today that it has formed a strategic partnership with Forensic Data Recovery Inc. (FDR) of Victoria Canada.

The arrangement will enable Eden to present FDRs certified Computer Incident Forensic Response (CIFR) Training as well as Guidance Softwares EnCase product-related certified training.

"This is the first time the certified CIFR training has been made available to the Australian market, notes Alan Rankins, Eden General Manager Business Development. "It will provide government and corporate organisations with valuable information that will help them detect, monitor and prosecute offenders."

FDR is a privately owned Canadian company specialising in computer forensics investigation, consultation, and training. Its offices are located in Victoria British Columbia (headquarters), London Ontario, and now Sydney Australia.

FDR provides world-class computer forensics professional services and training for public- and private-sector clients. FDR is the sole Canadian reseller and Certified Training Partner for Guidance Software Inc. (EnCase) and has developed the Computer Incident Forensic Response (CIFR) Training Series.

"The Eden/FDR partnership is an important element of Eden's expansion program," says Mr. Rankins. "It adds considerable strength to Edens law enforcement capabilities whilst opening a portal to Canada for our law enforcement products and services."
