

engin goes "Unlimited" with new VoIP plan for residential users

Unlimited* calls to mobile, local, national + 15 international destinations

engin (ASX:ENG), Australia's leading broadband telephony company, has released another industry-best deal for residential users who want to significantly cut the cost of their monthly phone bills. The engin Unlimited Plan allows users to make unlimited* calls to mobile, local, national and 15 international destinations for just \$39.90 per month.

International destinations include landlines in the UK, US, China, India, NZ, Vietnam, Canada, France, Germany, Ireland, Netherlands, Spain, Italy, Philippines and South Africa.

Greg Cramer, General Manager of Marketing for engin, said: "Today, more consumers are wanting to cut and cap their phone bills. We built the unlimited plan to meet the needs of these customers. If someone is currently spending over \$39.90 per month on their home phone bill they should seriously consider how much they could save with engin."

People with family and friends overseas who want to stay in touch will also enjoy huge savings with the unlimited calls* to 15 international destinations."

There has never been a better time to start saving money with engin VoIP and we're offering a 30 day trial, so consumers can experience the benefits and savings of VoIP. If they are not happy, they can cancel the service after 30 days and just pay for what they have used, returning the equipment in original condition. However, we are confident once they have tried engin VoIP, they will remain customers for a long time.

The engin service is easy to set up and use - residential customers can use their existing home phone and just need a broadband Internet connection (cable modem, ADSL); a router or switch; and an engin Voice Box (which converts the analogue phone signal to digital). The computer doesn't even need to be switched on to make a call.

For more information and/or to sign up for the service, please go to www.engin.com.au

*Excludes some special services such as 1300/ 13XX. Residential use only.

About engin Limited - www.engin.com.au

engin is an Australian owned and operated telecommunications provider listed on the Australian stock exchange (ASX:ENG).

The engin service delivers Voice over Internet Protocol (VoIP) telephony services. Any broadband user is able to make and receive calls using their existing telephone handset. VoIP sends voice signals over the Internet, rather than through the regular telephone network. The advantage of this technology is significantly reduced local, mobile and international call rates.
