

ENSTOR announces the release of the ENSTOR Coherence Software Suite

[ENSTOR Coherence software suite simplifies enterprise storage management](#)

ENSTOR, one of Australia's largest independent integrators of enterprise storage and server virtualisation solutions, announced the release of its ENSTOR Coherence Software Suite.

Developed over the last seven years, ENSTOR Coherence is a result of ENSTOR's experience in the Storage & Server Virtualisation market. It enables IT departments to easily manage storage maintenance and perform redundant backups through a simple one-license program.

Siobhan Ellis, Product Manager at ENSTOR, By integrating with existing storage management software from leading vendors including Symantec Veritas, HDS, EMC, Legato, IBM and VMware, ENSTOR Coherence enables organisations to achieve greater functionality from their existing storage investments.

Furthermore, organisations who have implemented ENSTOR Coherence will experience less administrative complexity whilst realising significant cost savings which will continuously improve their return on investment.

Additionally, ENSTOR Coherence has been specifically developed to help IT managers meet their SLA requirements. Siobhan Ellis continued, ENSTOR understands that maintaining service level agreements is a constant challenge for IT managers across all industries. Through implementing ENSTOR Coherence, IT managers will be able to provide a higher level of service than previously possible.

Pricing and Implementation

ENSTOR has now developed ENSTOR Coherence as an out-of-box solution for the shrink wrap market. However, to realise the full potential of the suite ENSTOR recommends a professional services implementation to ensure full functionality.

For pricing and additional information on ENSTOR Coherence please contact ENSTOR's Sales Manager Pete Kilby at 1300 137 880.

About ENSTOR

Based in Sydney, Australia, ENSTOR is a specialist system integrator in the area of storage, protection, availability and virtualisation solutions.
