

ESTA enhances emergency radio network with Motorola

In readiness for the 2010/11 Victorian bushfire season, the Emergency Services Telecommunications Authority (ESTA) has today announced the successful completion of a multi-million dollar project with Motorola Solutions, a business of Motorola Inc. (NYSE: MOT) to enhance the coverage of its metropolitan two-way radio network in rapidly-growing population areas. ESTA provides Victorians with access to emergency assistance via the Triple Zero (000) service. The Metropolitan Coverage Enhancement Project (MCEP) provides enhanced coverage in the key areas of Berwick / Pakenham, Warrandyte and the Mornington Peninsula, all of which are areas of steady population and are considered to be extremely fire-prone. MCEP provides key enhancements to the core Metropolitan Mobile Radio (MMR) switching technology that enables further cost effective coverage and capacity expansion in the future. It also enables the deployment of secure IP dispatch consoles, improving the resilience of ESTA call taking and dispatching capabilities. MMR provides secure mission critical radio communications for police, fire and ambulance in the greater Melbourne metropolitan area and is provided on behalf of the State by Motorola under a Public Private Partnership (PPP). Andrew Wellwood, ESTAs acting chief executive officer, says the project was completed with minimum disruption thanks to the full co-operation and participation of Victoria Police, Ambulance Victoria and the Metropolitan Fire Brigade, ensuring those emergency services organisations (ESO) can make full use of the expanded capacity. In March 2004 the State Government commissioned Motorola to design, implement and manage a consolidated private two-way radio network for Victorias ESOs, solving the problem of mismatched, often incompatible systems while significantly enhancing coverage across the greater metropolitan area of Melbourne. The resulting MMR was the first emergency communications network service in Australia to be procured under a PPP, which ensured that risk for delivery of the service was apportioned to the most appropriate party, resulting in widespread benefits for ESOs, ESTA and the general public. Through the Motorola contract we have realised significant benefits. While Motorola continues to provide ESOs with next generation equipment and access to vastly improved functionality, call clarity and safety features, ESTA has been able to maintain the essential focus of emergency management and emergency telecommunications services a package which ultimately provides a service to a safer Victorian community, said Wellwood. Dr Michael NGuyen, general manager, government and public safety, Motorola Solutions Australia, said MCEP further enhances the existing MMR service that different ESOs can use to communicate with each other across the shared network. Mission-critical communications is one of the single-most important factors in successfully co-ordinating a public safety operation in response to an emergency, and the MMR has equipped Victorias ESOs with one of the countrys most sophisticated networks, he said. ESTA manages the MMR network on behalf of the State in accordance with the Governments Partnership Victoria principles. The network forms an important part of ESTAs call centre and dispatch operations, with 8,000 fixed, portable and mobile (vehicle-based) radio sets in use. The MMR service typically processes over 16 million calls per year. * * * * *

* About Motorola Motorola is known around the world for innovation in communications and focused on advancing the way the world connects. From broadband communications infrastructure, enterprise mobility and public safety solutions to high-definition video and mobile devices, Motorola is leading the next wave of innovations that enable people, enterprises and governments to be more connected and more mobile. Motorola had sales of US \$22 billion in 2009. For more information, please visit www.motorola.com Media Contacts Alexandra Reynolds
