

Flexible & Super-Slim mounting technology for the latest generation of flat screen displays

Atdec launches a tilt adjustable wall mount to suit the latest HD and 3D TV's

Sydney, Australia Atdec, the Australian company known for their innovative and stylish screen, projector and laptop mounting technology, is pleased to announce the release of the Telehook Ultra-Low-Profile Tilting Wall Mount. This Australian designed product combines large screen compatibility with spring assisted tilt operation and a minimalist wall offset.

The TH-3060-LPT is designed for premium thin and flat displays. It features an ultra slim 1 (25mm) design for a stylish wall mounted finish to suit the latest in home and office dcor. The product allows installation at an elevated height with tilt adjustment for variable picture orientation, particularly important with the latest High Definition and 3D TVs. Spring assisted operation enables fingertip adjustment with the screen holding itself in any position; flush and unobtrusive when not in use, then precisely angled for an optimal viewing experience.

Jerome Green, CEO of Atdec, said, We employed an extended development process for TH-3060-LPT. The design team looked closely at the various displays being produced by the international electronics vendors, the technology being incorporated, how people needed to interact with it, and how they could integrate with their environment. People are now buying large TVs with interactive features and looking at installing them in all manner of rooms.

The TH-3060-LTP is suitable for LED, LCD & Plasma screens up to 50kg / 110lbs. It features universal mounting hole support for standard and non-standard VESA patterns from 200 to 800mm wide by 100 to 500mm high. Manufactured from quality components, it is backed with a 10 year warranty.

Offering a high degree of flexibility in terms of installation and operation, the TH-3060-LPT incorporates a Quick Attachment mechanism for easy mounting and removal/ relocation. It supports installation at heights above the viewer with a spring loaded tilt operation for easy picture adjustment. The mechanism has an offset feature which allows the bottom edge of the display to be tilted out for cable, USB/Memory slot and function control access. It also allows horizontal position adjustment for fine tuning of the screen location and picture image.

Designed for user installation, the Telehook TH-3060-LPT comes with an easy to follow installation guide and all the hardware required for display attachment. It also comes with mounting hardware to suit a variety of common structures. The new TH-3060-LPT is being shown for the first time at the Cedia show in Darling Harbour, Sydney Australia. Product is expected to be available in June with an MSRP of \$279. For more information contact Atdec on 02-8729-5000 or see www.atdec.com.au

About Atdec
