

HubOne announces the release of Enterprise Profile Management

Beta program successfully completed, customers can now purchase the product.

Sydney, 12:34:56 7/8/09 HubOne, an Australian technology start-up today announced the release of their first product, Enterprise Profile Management. Already with a healthy order book across large Australian Organisations, Enterprise Profile Management is designed to provide easy and seamless access to information on people, skills, education and experience within an organisation.

As well as being their first product to market, Enterprise Profile Management has been tested and confirmed as compatible with Microsoft Windows 7, the new operating system shortly to be made generally available by Microsoft.

HubOne CEO Nick Beageard spoke of their commitment to quality, Its difficult as a start-up to develop robust, enterprise ready software. Our commitment to the Microsoft Logo Program demonstrates that were serious about this.

Our customers demand high quality, valuable software. He said, ..and were delighted to be able to announce this release.

Enterprise Profile Management is designed for organisations that already use Microsoft Active Directory and extends the basic information with a rich and searchable profile.

We have been running an extensive Beta Program with some extremely large customers and have taken that feedback straight into this release.

Beageard said.

Our evaluation customers are already beginning to report the benefits Enterprise Profile Management has for businesses of all sizes. We expect to be able to release our first case study customers soon. He said.

HubOne has reported enquiries world wide since they announced their Beta Program in July of this year and expect to announce their founder channel partners shortly.

More information on Enterprise Profile Management and links to download the softwareare available at HubOnes website: <http://www.hubone.com>.
