

iPrimus connects the first customer in new release Tasmanian NBN sites

Continues roll-out of its FTTH Services with new "No Worries" Fibre Plans

Melbourne, 30th May 2012: iPrimus, a part of Primus Telecommunications Group, Inc. (NYSE: PTGi), today announced that it has successfully connected the first NBN Co customer in Triabunna, Tasmania, the latest area to be lit up by NBN Co as part of its national roll-out program. The first customer on the NBN in Triabunna - a family of four - commented: "We are really looking forward to the National Broadband Network and to be the first customer in Triabunna is fantastic. I will use the extra speed and download capacity to keep researching my ancestry and I believe that the new service will help with my current connection woes when I am using Skype to talk to friends. I am sure my teenage kids will fully utilise NBN for the important things such as homework, and researching, as well as using it to surf social media sites and watch YouTube clips." iPrimus is offering a flexible range of Fibre plans with newly increased data allowances to encourage customers to connect to the National Broadband Network (NBN). This includes the No Worries Fibre Max bundled plan with a 200GB monthly data allowance and included calls to standard local, national and Australian mobile numbers. Primus is also offering standalone broadband plans of up to one terabyte monthly allowance. New customers to iPrimus Max bundle 24 month plans will also be offered half price access fees for the first six months[1]. Additionally, iPrimus customers who have previously signed up to the iPrimus Fibre Max Bundles have automatically been upgraded to the new "No Worries" plans with data allowances increased to at least 200GB per month. Today's announcement is another milestone in Primus Australia's commitment to the accelerated roll-out of its Fibre-to-Home services and the company will soon be delivering further fixed wireless and satellite services via the NBN when the on-boarding process is complete and services are tested and approved for customers. Primus has a close working relationship with NBN Co as part of its commitment to deliver high-quality affordable services for its customers across Australia. It was recently announced as the first Retail Service Provider accredited on the NBN B2B system and has been selected as NBN Co's lead partner in its UNI-V Enhancement Program. This program aims to enable Primus and other service providers to provide a telephony service using the NBN UNI-V port to every home in Australia covered by the NBN fibre rollout, potentially providing quality voice services to millions of Australians nationwide. Tom Mazerski, Primus CEO, said "Ensuring enhanced and consistent voice quality on the NBN is a key priority for Primus. We have been a carrier of voice traffic in Australia since 1997 and our experience in providing a high quality switched voice network for both consumer and corporate customers puts us in a position to deliver quality voice services to customers on the NBN. In addition, our collaboration with NBN Co on the UNI-V Enhancement Program acknowledges this expertise as we work together to ensure future service delivery excellence of voice services on fibre." Ben Salmon, NBN Co General Manager Sales, added "NBN Co welcomes the commencement of high-speed broadband services for the residents and businesses of Triabunna, and we are pleased to see that they will have access to a range of exciting new telephone and internet options."
