

Leatherman Super Tool 300

NEW FROM LEATHERMAN

Leatherman Super Tool 300 the original heavy-duty multi-tool is back!

Leatherman is bringing back Super Tool with plenty of new and upgraded features.

With turbulence in the financial market and recession fears overhanging the economy there is no better time to invest in the Leatherman Super Tool 300 and cut back on handyman expenses!

Arguably the most important feature of the Leatherman ST300 is they have been optimized for strength. More steel was added to key areas, making them the strongest, beefiest pliers we've ever produced. In addition the neck of the pliers is sloped for reaching even further into tight spaces.

Cutting wire regular, stranded, or hard is a common application on the job. When frequent, heavy pressure is applied, cutters can become dented and dull, causing the pliers to stick and jam up. By making the regular/hard-wire cutters removable they can be sharpened or replaced on the spot.

To improve on safety, the new Leatherman supertool ST300 has Edge-safety Clumping. If you pull on either of the two knives they are the only implement that will come out. Conversely if you pull on any of the other features the sharp-edged ones

stay put.

The ST300 straight blade is hollow ground for easy sharpening. Screwdrivers are in the sizes professionals use most and are also hollow ground for a better fit. The handles are rounded for comfort and have cut outs on the side to easily access blades when wearing bulky work gloves.

QUICK POINTS

Large Pliers are the strongest we've ever produced and they give you more power to put some serious torque on your toughest jobs.

Removable/replaceable wire cutter inserts let you repair and/or re-sharpen dents on the spot with the tools file.

The sloped-top handle design means you can maneuver your pliers further into tight spaces than any tool we've ever made.

Rolled handle edges are comfortable in the hand, even when you're giving it everything you've got.

Large cut outs on the side of

the handle make it easy to get components out even with gloves on!

Intuitive component access lets

you grab the tools you need and keeps them in groups of sharp and non sharp-edges for safety, as you do.
