

LED LENSER P17

LED LENSER OPTOELECTRONICS

THE NEW POWER & PERFORMANCE P17 TORCH

Whats the difference between a Led Lenser torch and a normal torch? Let us enlighten you

When you use a normal torch, only 10% of the batteries power is used to produce light, the other 90% is wasted energy, converted to heat. Thats why torches get warm when you use them.

But the LED revolution has changed all that. A torch that uses an LED (Light Emitting Diode) rather than a conventional bulb converts all the energy from your batteries to light, so the torch is brighter, and batteries last longer. An LED, unlike a bulb, can operate for tens of thousands of hours without ever needing to be replaced.

When it comes to power and performance, nothing beats the unique optical system & technology of the Led Lenser P17. This large torch emits intense white light as powerful as a spotlight and visible from up to 20 kms away. The one-handed speed focus operation is practical and convenient, the body is shock-resistant and can withstand great temperature fluctuations, and with the lengthy battery and LED service life, the P17 is in for the long haul.

Trusted by emergency forces workers, tradespeople, hunters, anglers & sportspeople or simply for powerful outdoor recreational use, the LED Lenser P17 continues to perform in the toughest conditions where only the best will do. When a robust torch is needed that will go the distance (quite literally) then trust the P17 to perform for you.

Features:

* Advanced focus system multi-optic one-handed speed focus

* 3-step quick cycle function

* Power transformation technology

* Strong, lightweight aluminium body

* Splash-proof and shock-resistant housing

* Gold-plated contacts

* Emits white light as bright as a spotlight

* LED provides around 100,000 hours of light

* 3.83 watts

* 188.9 Lumens focusable light

* Weight: 799 Grams

* Length: 33cm

* Battery life: 700 hours (approx.)

* Requires 3 x D batteries included

R.R.P \$199.95
