

NCR TagWorks Provides Essentials

SYDNEY, Australia NCR Corporation (NYSE: NCR), a leader in end-to-end radio frequency identification (RFID) solutions, today announced NCR TagWorks, a peel-and-apply RFID product suite designed to provide a rapidly deployable and readily tailored tagging solution to meet RFID compliance mandates.

The NCR TagWorks solution provides a turnkey offering to meet EPCglobal standards and major manufacturer, distributor and retailer guidelines. The cost-effective solution addresses the need for businesses to readily access the benefits of RFID-enabled inventory tracking and supply-chain visibility. NCR makes the transition toward RFID more manageable by offering a complete end-to-end solution including tags, hardware, software and services allowing companies to quickly and efficiently begin tagging cases and pallets of product.

Touching industries around the world, the NCR TransitionWorks portfolio of global RFID solutions encompasses thoughtware, hardware, tags, services and software, including Teradata data warehouse solutions, to help customers solve real business problems.

The NCR TagWorks solution simplifies rapid design and deployment of a highly reliable RFID tagging and tracking program, said NCR Vice President for Global RFID Solutions John Greaves. Customising and integrating the key components of a robust RFID solution can now be fully achieved in less time, for less cost, through a single point of contact committed to a customer's long-term RFID objectives.

NCR TagWorks is a stand-alone, fully integrated, peel-and-apply solution including tags, readers, servers, printers and NCR software. NCR installation, training and support services help ensure reliability and disruption-free environments. Because NCR serves as the single point of contact, businesses can avoid the hassle and confusion of dealing with multiple vendors for their RFID solutions.

NCR also makes it simple to expand and customise the NCR TagWorks solution by providing a range of additional products and services. As their business grows, customers have the option to incorporate other advanced features such as handheld RFID scanners, conveyor installations, a selection of tag sizes and inlays, and enterprise system integration.

About NCR Corporation
