

## Orange grows the cloud in the SITA skies across Asia Pacific

Orange Business Services is accelerating its growth strategy in Asia Pacific by focusing on key areas such as network enhancements, cloud computing, strategic partnerships and network-related IT services.

Alongside SITA, the air transport industry IT specialist, we are building global, high performance, managed cloud computing infrastructure, said Gordon Makryllos, Managing Director Australasia, Orange Business Services.

A Sydney data centre will be operational in Q3 2012 with Hong Kong and Johannesburg, linking up with data centers in Atlanta, Frankfurt and Singapore, operational in Q1 2012. These Tier III+ and Tier IV data centers will be interconnected via Oranges high-speed MPLS network and will enable us to unlock cloud computing potential on a global scale, and to offer infrastructure as-a-service and desktop as-a-service to its APAC customers.

As part of Oranges global strategy, Conquests 2015, the focus is on targeted services such as very high broadband, unified communications, contact center solutions, video services, security and mobile device management.

Today, Orange Business Services offers a strong presence in Asia Pacific in terms of people, solutions and customer experience supported by industry-leading [1][2] network coverage, said Vivek Badrinath, chief executive officer, Orange Business Services. We provide end-to-end support both to multinationals expanding within the region and to the successful corporations who have begun to expand significantly out of the APAC territories. We look forward to continuing to implement our ambitious emerging markets strategy by launching new projects that will benefit our customers while keeping us at the forefront of the industry.

During 2012, Orange Business Services will complete the implementation

of a 10G ring network between Japan, Hong Kong and Singapore providing customer benefits such as classes of service, dynamic bandwidth reallocation, improved SLAs, VPLS and 1G access. Upon completion of this project, Orange will have its Asia Pacific, Europe and U.S. dual 10G belts interconnected.

To support its services growth, Orange has invested in a new Solution Center in Singapore that gives customers in key industries banking and finance, oil and gas, logistics and transportation, pharmaceutical and technology the opportunity to experience demonstrations of solutions that address specific business challenges. A Beijing Solution Center will be launched in early 2012.

#### Customers

benefit from strategic partnerships such as the one announced recently between Orange and China Telecom, which makes the most of the complementary aspects of their APAC networks both submarine and terrestrial and improves customer support in China. In the same way, Orange Business Services and NTT Communications cooperate on network infrastructure (sites, capacity sourcing, transmission infrastructure sharing) and data centers in APAC.
