

Paalink Communications announces the official opening of its Brisbane Corporate Offices and support centre - Paalink Queensland.

Paalink Communications, a leading architect and distributor of last mile, wireless and fibre optic network solutions today announced the official opening of its Brisbane Corporate Offices and support centre - Paalink Queensland.

The expansion appoints Paalink Queensland as the preferred RAD, Alvarion, FibroLAN and Ceragon access solutions provider to the Queensland Government and other strategic and key accounts in the State.

Bob Bishop, CEO Paalink Queensland said the opening came at a time when demand for communications and access solutions was booming throughout Queensland.

The penetration of internet services in Queensland increased by 66% (249k to 416k lines) in the last 12 months. Queenslanders downloaded 2.4m MB of data in the March Quarter which is a doubling from the same period last year.

The new office and support centre will cement Paalink's position as the premier provider of advanced communications solutions.

The development is a valuable move in continuing Paalink's commitment to providing the highest standards of access solutions, support and service delivery throughout Queensland.

The move will enable Queensland carriers, service providers and key accounts to have direct local access to Paalink design and technical resources, he said.

Paalink is the leading Asia Pacific distributor and supplier of last mile and broadband internet wireless products which enable companies to reduce current infrastructure and operational costs and reap rapid return on their investment.

These products allow companies to support both their legacy and future direction telecommunications networks, while boosting competitiveness and profitability.

About Paalink

Paalink is the leading architect and distributor of last mile, wireless and fibre optic network solutions to the telecommunications sectors across Australia and the Pacific.

As the distributor for RAD Data Communications, Alvarion, FibroLAN, Ceragon and Expand Networks, Paalink provides a complete range of access product solutions to serve the technological and business requirements of carriers, service providers, and enterprises.

Paalink offers a full range of last mile and broadband internet wireless products which enable companies to reduce current infrastructure and operational costs and reap rapid return on their investment.

A broad technology offering includes ATM, IP/Ethernet, Frame Relay, TDMoIP, E1/T1, E3/T3, broadband wireless, fibre optics, voice and data compression, rate interface and protocol conversion, and integrated management.

These products allow companies, regardless of their location to support multiple services (voice, internet access, video conferencing, and video streaming) for next generation telecommunications networks and continued support of legacy systems.

Founded in 1994, Paalink has grown to become the leader in advanced telecommunications access solutions in Australia and across the Pacific with offices in Canberra, Melbourne and Brisbane.
