

Seccom Global launches SecureSCREEN cloud security suite

SYDNEY, March 16.

Seccom Global, leading Australian managed security services provider (MSSP), has launched SecureSCREEN, a complete in-the-cloud security solution protecting all network connectivity points with unified policy.

SecureSCREEN scales up to protect hundreds of thousands of users, and utilises global in-the-cloud infrastructure to deliver a complete online experience to any authorised end user. It enforces and maintains comprehensive information security and corporate policy, and offers full compliance reporting, log correlation and out-of-the-office information security protection for all mobile devices (including Blackberry and iPhone).

With no hardware or software to install, near-zero latency and a completely invisible footprint, SecureSCREEN is highly cost effective, as the most complete, flexible and comprehensive network security system in its class.

SecureSCREEN is the latest SaaS service to be developed by Seccom Global. The company's partnership with US-based Zscaler to deliver this complete proxy-based content protection solution has been described as taking SaaS to a whole new level. Zscaler founder, Jay Chaudhry, will fly to Australia to launch SecureSCREEN on Thursday March 25th.

About Seccom Global

One of Australia's fastest growing information security providers, Seccom Global is recognised as a market leader in managed security services. The company operates solely in the Managed Security Service Provider (MSSP) space and has invested heavily in up-to-date and comprehensive systems to enable delivery of management and support services.

Seccom Global offers professional and managed services and technologies to help businesses and government gain greater visibility and control of their Internet business risk.

The company is 100 per cent focused on edge network security and connectivity, collaborating with customers to align their information security connectivity requirements to their individual business needs. Customers include many of Australia's best known organisations. Seccom Global is Fortinet's most experienced reseller in Australia and is a Fortinet international partner.
