

The revolution in digital cameras:

Canon's EOS 60D

Not yet released Canon's latest offering the EOS 60D comes with numerous latest features which offers professional photographers and enthusiasts with a much appreciated lightweight option. Features like 18.0-megapixel CMOS sensor allows photographers create large, poster size prints and crop images without losing any detail. Other features are the DIGIC 4 Imaging Processor and the ISO 100-6400. It includes a 18-135mm f/3.5-5.6 IS UD standard zoom lens. Other features are the improved EOS HD Video mode with manual exposure control and the vari-angle 3.0-inch with clear view LCD monitor. 5.3 fps continuous shooting which enables to take pictures from various angles. Enhanced and creative filters adds a huge capability to take various photographs. An excellent camera both for professionals and semi-pro comes with a clear display and robust construction. Processing, menus, image playback, shutter lag, start up time and anything to change in the camera is extremely fast. It comes with high quality digital capture and skillful post-processing with more control and superior results. 60D greater resolution allows greater freedom of cropping and thus producing high quality pictures. The vast improvement in ISO performance, functions, menu, fps are invaluable. The very powerful 60D provides an opportunity to photographers to enhance their skills and fully use all the amazing and advanced features of the new Canon EOS 60D. A good camera should make a photographer invincible, open up a wide array of creative skills helping him to produce excellent images. Canon's EOS 60D is thought to be of a great comparable image quality and instant previewing. This camera is supposed to be a winner offered by Canon and it unleashes the creative potential of the photographer. Canon 60D has brought in the hands of the photographers such in-camera features and functions which empower them to capture, display and print the image quality they desire for.
