Websense, Inc. (NASDAQ: WBSN) today announced that it has been awarded the 2011 Asia Pacific Market Share Leadership Award In The Web Security Market by leading global growth consulting company, Frost & Sullivan.

The Frost & Sullivan Award for Market Share Leadership of the Year is given to the company that has demonstrated excellence in capturing the highest market share within its industry in a specific year.

As a provider of Web security, data security, and email security, Websense protects tens of thousands of organisations worldwide. Its TRITON solution offers complementary Web security, email security, and DLP - separately or together - and in flexible hosted, appliance, and hybrid deployments.

According to a published Frost & Sullivan market report*, Websense remained the dominant player in the APAC Web security market in 2010, as it increased its market share lead. In many ways, Websenses success in the segment could be attributed to its strong branding and high visibility levels, along with its well-developed network of channel partners across the APAC region. Moreover, Websenses efforts to enhance its standing in the data loss protection arena also boosted its credibility and positioning as a security-centric vendor.

Within the Web security market, Websense offers Web Security Gateway, Web Security Gateway Anywhere, and Hosted Web Security Gateway. Websense solutions are supported by the company's ThreatSeeker Network and Advanced Classification Engine (ACE) for accurate identification and classification in more than 370 different file types and formats. Multiple detections are used to help organisations remain in compliance and assists in enforcing content use policies. Websense TRITON Defensio also provides protection for enterprise social media offerings by keeping sites clear of offensive and dangerous user-posted content.

The Websense TRITON solution <http://www.websense.com/content/TRITON-solutions.aspx?cmpid=prnr> is unique in its ability to remove threats and risks while enabling organisations to take advantage of rich internet applications, SaaS, social media and mobility. It stands in marked contrast to traditional firewall UTMs, which dont scale to solve today's security threats, and other legacy controls like antivirus and URL filters that look only at the file and website. The TRITON solution combines Websense Web and Email Security Gateway technology, including hybrid deployment and data loss prevention (DLP), into the world's first unified content security gateway.

This award underlines the momentum throughout the Asia Pacific region for Websense solutions which can eliminate bloated duplication of systems, while sharing intelligence across the web, data and email channel. We are delighted that our product strategy, a revolutionary unified architecture for the most advanced web security in the industry, has been recognised for its contribution to the IT industry itself, said Alison Higgins-Miller, vice president, Asia Pacific, Websense.

###

About Websense, Inc.

Websense, Inc. (NASDAQ: WBSN), a global leader in unified Web security <http://www.websense.com/content/WebSecurityOverview.aspx?cmpid=prnr> , email security <http://www.websense.com/content/MessagingSecurity.aspx?cmpid=prnr> , and data loss prevention <http://www.websense.com/content/DataSecurity.aspx?cmpid=prnr> (DLP) solutions, delivers the best content security for modern threats at the lowest total cost of ownership to tens of thousands of enterprise, mid-market and small organisations around the world. Distributed through a global network of channel partners and delivered as software, appliance and Security-as-a-Service (SaaS), Websense content security solutions help organisations leverage web 2.0 and cloud communication, collaboration, and social media while protecting from advanced persistent threats, preventing the loss of confidential information and enforcing internet use and security policies. Websense is headquartered in San Diego, California with offices around the world. For more information, visit www.websense.com.
