

\$2.4 MILLION SERIES A FUNDING ROUND

Australian water filtration company, Complete Home Filtration, has completed a \$2.4 million Series A funding round.

This influx of capital will facilitate the further expansion of the business and fast track the production of Attapure- the company's proprietary filtration technology – which is removing 100% of PFAS compounds from contaminated bore water via a novel PFAS removing Point of Entry water filtration system.

Since seed funds were invested in early 2019 the business has experienced phenomenal growth (X12) as it has grown from WA to now commencing its expansion into the Eastern States via Brisbane and Sydney.

Complete Home Filtration specialises in whole of home water filtration systems that deliver freshly filtered water to every tap in the home. This upstream solution for household water ensures customers experience the luxury of showering, bathing and drinking high quality premium water which is better for both health and home.

"I am absolutely delighted to welcome Andrew Sypkes of the Sypkes Group as an investor and to see the team at BetterLabs invest again after a successful seed round. It has been a pleasure having the expertise and advice of both Derek Gerrard and James Edwards at BetterLabs over the last 18 months"

"These funds will really help us to accelerate our growth, in terms of new technologies and new markets and increase our manufacturing capabilities right here in Australia. We are super excited to be able to help more everyday Australians take control of their water and experience the best water quality possible from every tap in their homes"

Suzanne Dodds: Complete Home Filtration Managing Director

Suzanne Dodds has over 13 years experience in water filtration and has been internationally recognised as a thought leader in the water filtration space, winning a "First Among Equals" and a Tech 20[+] award from Women in Technology in 2019 for her development of Attapure – the PFAS removing point of entry system.

This product has also been supported by Government and the Defence Force through grant funding via Accelerating Commercialisation and The Defence Science Centre. With over 90 PFAS contamination sites across Australia and over 700 in the US the market for this product is enormous.

"With a rapidly growing team across the country we are looking forward to delivering exceptional products and customer service to our customers nationally and to providing jobs and opportunities to our staff". Mrs Dodds said.
