CAD/CAM Services Announces Strategic Partnership with 7Oceanz in the Caribbean, Central and South American Regions

Celina, TX – June 23, 2011 – CAD/CAM Services Inc., Medical Division and 7Oceanz Holdings Inc., today announced the Caribbean launch of iCloud WebPACS, a state-of-the-art technology that unites healthcare facilities globally through a standard web browser. The strategic partnership puts CAD/CAM Services in a position to extend its innovative Radiology Services Online (RSO) product throughout the Caribbean, Central and South American regions while enhances the capabilities of both institutions to meet their common goal of improving efficiency within the medical digital imaging world.

"Together we are able to provide a technology that assist in increasing efficiency by tracking patient information, maintaining digital and digitized images, creating and issuing radiology reports as well as managing and maintaining billing service," says Scott Shuppert, CEO of CAD/CAM Services. "Historically only large medical centers were able to benefit from PACS (picture archiving and communications systems) and there have been several significant barriers to entry for implementing in remote, rural and emerging markets. By drawing upon the supercomputing power of the cloud, data is processed remotely and streams medical images in full diagnostic resolution on any Internet-enabled PC or mobile digital device". 7Oceanz is based in the Caribbean enabling them to work closely with the healthcare community throughout the region. This partnership combines 7Oceanz understanding of clients' needs with CAD/CAM Service's technical expertise and ability to develop solutions specific to this market.

Through cloud technology, we are able to provide a solution that hosts and manages your data via the web providing primary, secondary and disaster recovery image storage that is scalable to your needs while eliminating costly onsite storage hardware. iCloud WebPACS, powered by RSO, hosts its server farms in Texas and Georgia, USA providing image availability that is supported through fully redundant servers. Our zero-footprint technology offers a digital imaging solution for all modalities with no hardware or software to install and enables you to have your facility up and running within a couple days. Comprehensive web-based storage, exchange and interpretation of images for healthcare providers.

DISTRIBUTE DICOM IMAGES

Through vendor-neutral archiving and information sharing, healthcare facilities, providers and specialists can implement a web based PACS and interface with other PACS, giving near real-time access to images.

MAINTAIN ELECTRONIC MEDICAL RECORDS

Electronic Medical Records (EMR) offer great benefits for patients and their doctors. EMR providers make it possible for electronic medical records to be shared among patients, doctors and other medical providers to offer important information such as blood type, prescribed drugs, medical conditions and other aspects of a patient's medical history.

KEEP COSTS DOWN STAY COMPETITIVE

Today's medical environment demands efficient and cost-effective workflow. Uniting healthcare providers through a fast, versatile and economically viable technology which enables images and data to be seen and stored online assists in accelerating performance and profits through improved patient communication.
