Melbourne, Australia – February 20, 2017 – Andatech is taking new strides to penetrate the wireless technology market by introducing the SolarCam - a solar-powered outdoor wireless security camera - to bridge the gap between consumers who want complete control over their security needs without the hassle and hefty price tag of CCTV systems.

Mr. Irwandy Tan, Director of Andatech, the double Australian Business Awards (ABA100) winner for Business Excellence and Business Technology 2016, said that the Solarcam is entering the market at an opportune time where increasing security concerns are pushing discerning consumers to seek out convenient and affordable solutions.

“The SolarCam works as a seamless, self-sustaining security system without the need for wiring,” he said.

“As such, it is excellent for places where normal wiring installation is difficult or challenging, such as car yards, outdoor parking lots, marina bays, and even farmyards for livestock monitoring.”

Even with HD 720P video recording, wireless capabilities, motion recording, and instant alert capabilities, the Solarcam consumes less power with a charge that lasts up to a month and a standby time of up to 6 months.

With the modern consumer in mind, Solarcam smart wireless security camera provides live feed to a connected Android or iOS device and consumers can monitor multiple cameras from different locations all in the palm of their hand.

For night or low-light incidents, the Solarcam comes with IR Night Vision capabilities of up to 5 metres and can withstand different weather conditions with its IP65 dustproof and waterproof rating.

Solarcam aims to be the security solution for both owned and rented properties as it comes consumer-ready and can be installed hassle-free and wire-free by consumers without needing to hire an electrician or handyman; increasing convenience and cost-savings for the household.

The Solarcam outdoor wireless security camera is now available from Andatech and authorised resellers.
