

SYDNEY, March 26. Anomali, the leader in intelligence-driven cyber security solutions, today announced that it has named Netpoleon, a leading provider of integrated security, networking solutions and value added services, as one of its new value added distributors in the Australia New Zealand (ANZ) market.

Joint customers will be able to accelerate detection and response to reduce risk across their networks.

The Anomali product portfolio includes Anomali ThreatStream, the leading threat intelligence platform (TIP), Anomali Match, an enterprise detection solution that matches external threats with any that have breached users' networks, and Anomali Lens, a Natural Language Processing (NLP) feature that scans web content to immediately identify and prioritize threats.

Supported by advanced machine learning and expert resources, customers are able to broaden visibility over all threats, gain immediate detection capabilities, create efficient investigations, and operationalise threat intelligence across their infrastructures for automated threat blocking and faster response.

"The ANZ sector is experiencing remarkable economic growth and unprecedented levels of cyberattacks," said Paul Lim, Netpoleon A/NZ regional director. "With Anomali, we'll be able to introduce our joint customers to solutions that will help them to avoid costly and disruptive security incidents." Netpoleon is headquartered in Singapore and holds offices across Australia, Cambodia, India, Indonesia, Malaysia, Myanmar, Philippines, Thailand, Vietnam, and Japan. In A/NZ Netpoleon has offices and team members in Sydney, Melbourne and Brisbane, and will expand to New Zealand in 2021. "Anomali is experiencing overwhelming demand across the entire region for our technologies, which are helping customers to identify and neutralize adversaries before they cause enormous damage to their environments and reputations," said Stree Naidu, Anomali's Senior Vice President and General Manager for Asia Pacific and Japan (APJ).

"Netpoleon has deep and wide access along with the technical know-how needed to help us build a robust and efficient channel that will meet customers' expectations."
