

AWMS - Melbourne, releases "PMP monitoring for Websites"

Increased Web Traffic means more Sales...

After much planning and refining, AWMS is proud to announce the release of their new "PMP" monitoring system for Australian Businesses. The PMP (Pro-Active Management Program) monitors, analyses, makes recommendations and suggestions on your sites performance and how to improve ranking and site hits. Clients receive a detailed monthly report outlining their websites performance broken up by various Categories and Segments. Various analytic tools are utilized to compile the report, which is extremely easy to understand and saves companies the headache of doing it themselves. A low monthly subscription is accepted, the subscription is rebated should you employ any of AWMS recommendations, which includes methods of improving returned results in Search Engines, increasing sites activity in a Geographic location plus many more ways of improving your sites performance. In other words we help to keep the Phones ringing..... For more information please contact us directly Dale Rodsted - CEO www.awms.com.au 03 9015 9698
