

Bespoke Training Services Named Amazon Web Services Authorised Training Partner for NZ

Spring AWS Training Schedule announced for Auckland, Wellington & Christchurch

Bespoke Training Services has been named the Amazon Web Services (AWS) Authorised Training Partner for New Zealand, after successful rollout of AWS training in Australia. Courses offered through Bespoke Training Services are designed to help deliver cloud-based solutions using the AWS platform, and realise the cost savings and efficiencies the cloud can enable in an organisation.

To coincide with this announcement, Bespoke is highlighting its Spring AWS Training Schedule for IT professionals slated for September in Auckland, and November in Wellington and Christchurch. These hands-on, intimate, instructor-led technical seminars will be delivered by highly qualified AWS trainers.

“As an important complement to the online resources offered by Amazon Web Services, instructor-led sessions offer IT decision makers and technology professionals the opportunity to become more familiar with AWS capabilities through immersive, hands-on exercises,” said Trent Rosenthal, Director, Bespoke Training Services.

“The face-to-face training from an AWS expert is valuable, as is the opportunity to ask questions and discuss any challenges you may be facing in your own implementation of Amazon Web Services,” said Rosenthal.

AWS instructor-led training sessions help those using the AWS platform to deepen their cloud expertise, with targeted and role-specific training. As well as working towards recognition of their skillset through AWS certification, trainees will become more proficient with the AWS platform, enabling them to more effectively and efficiently design, build, deploy, monitor and scale available, efficient and secure applications on behalf of their organisations and clients.

Upcoming Training Sessions

AWS Essentials

Auckland 9 September 2014

Christchurch 25 November 2014

Wellington 25 November 2014

Architecting on AWS

Auckland 10-12 September 2014

Christchurch 26-28 November 2014

Wellington 26-28 November 2014

Who Should Attend?

The AWS Essentials course is designed for business leaders and technology professionals who need assistance making cloud decisions and / or an introduction to Amazon Web Services, or those seeking first level training to support implementation of the AWS platform. AWS experience is not required.

Architecting on AWS is designed for Solutions Architects and other technology professionals seeking to gain a deeper understanding of AWS services so they can level-up their usage of the platform and stay ahead of the pack. The technical seminar will teach attendees how to design scalable, elastic, secure and highly-available applications on AWS.
