

SYDNEY, May 26, 2020. Technology entrepreneur Greg Wyman has launched the Australia and New Zealand operation of Bufferzone Security, a provider of next-generation endpoint security solutions. Wyman brought Backup Exec/Veritas, Brocade and StorageCraft to the region. Bufferzone's ANZ business will augment operations in the US, Europe, Japan, South Asia, Africa and Israel. The company protects organisations from advanced threats including ransomware, zero-day attacks and phishing scams. Israel Levy, CEO at Bufferzone said: "We are proud to work with Greg and his A51 team in introducing an MSP (Managed Service Provider) model for our technology. We believe Australia and New Zealand are perfect for the initial launch of this program due their size, culture and vast number of SMB businesses." Bufferzone's unique solution protects endpoints of all business sizes by creating a local, lightweight and secure virtual container on each user's PC or laptop that prevents malware from escaping to infect the corporate network. Wyman said: "According to Verizon in 2019, 94% of data breaches start with email and/or the web. Using Bufferzone, whenever a user clicks a web link, visits a website, downloads a file from the web or opens an email attachment, it is opened in a lightweight, secure virtual container located on the user's PC or laptop. "Malware can't escape from that container, so the user's PC/laptop is protected and malware is prevented from compromising the corporate network, even with remote workers." Wyman added: "Our ethos is 'we know you can't detect all threats, but you can contain them'. "We are an ideal complement to existing security products. We are able to deliver an exceptional level of protection of endpoints and prevention of network infections as a powerful, reliable and affordable complement to all security strategies." About BUFFERZONE BUFFERZONE® endpoint security solutions protect enterprises from advanced threats including ransomware, zero-days, phishing scams and APTs. With cutting-edge containment, bridging and intelligence, BUFFERZONE® gives employees seamless access to Internet applications, mail messaging application such as Zoom, Teams, Whatsapp, Line and WeChat, Network folders and removable storage – while keeping the enterprise safe.
