

Bushnell has once again exceeded the expectations of golfers with their newly launched Bushnell Tour V3 Golf Laser Range Finder. Designed with exciting and intelligent features, these series range finders branch into two models, namely the Bushnell Tour V3 and Tour V3 Slope Edition.

Some pivotal specifications of the Bushnell Tour V3 include Bushnell's award winning, proprietary PinSeeker technology, a newly integrated "JOLT" mechanism and Slope Mode, available with the V3 Slope Edition.

The V3 packs a PinSeeker function carried over from the Tour V2s. A popular feature that gives a close measure of distance, The PinSeeker technology works by presenting a visual of the course, and then smartly separates trees from the pin, measuring yardage exactly for you.

Adding to the PinSeeker technology, the Bushnell Tour V3 also boasts JOLT technology that sends a short vibration when the laser locks onto the flag. With this feature, golfers will be able to reaffirm the exact distance needed to reach and thus improving their overall game. The JOLT feature is so accurate it only vibrates when a pin has been identified, erasing all doubt that you are going to hit a tree.

The V3 is also rainproof, making it one of the toughest range finders to own. Regardless of weather condition, the V3 will produce accurate measurements of distance.

The Bushnell Tour V3 and Tour V3 slope edition is available in OpticsCentral Australia – home to a large range of Telescopes, Binoculars and Range Finders.
