

Conserve It releases PlantPRO CORE®

PlantPRO CORE is a low cost, high feature chiller plant control system based on the award-winning PlantPRO 2.0 solution.

Conserve It, developers of PlantPRO®, announced today the release of a new version of the award-winning solution, named PlantPRO CORE. PlantPRO, released in 2014, is award-winning plant room optimisation and control software developed by Conserve It. PlantPRO provides control of the chiller plant system in a way that delivers efficiencies beyond that of the individual components.

PlantPRO 2.0, released in 2017, is the latest version of PlantPRO, incorporating trusted and proven control algorithms supported by an informative HTML5 user experience.

Built on the success of PlantPRO 2.0, Conserve It is excited to announce PlantPRO CORE – a low cost, high feature chiller plant control system. PlantPRO CORE will be released in Quarter 1, 2019.

“PlantPRO CORE is a lightweight version of PlantPRO, and includes the most commonly used features of PlantPRO 2.0.” explains Conserve It General Manager Chirayu Shah.

“Our objective with PlantPRO CORE is to provide a control solution for more price sensitive projects and markets, whilst still maximising the features and benefits provided by the flagship PlantPRO 2.0 product.”

About PlantPRO®

PlantPRO uses feedback from its on-board real-time analytics, diagnostics, measurement and verification systems to continually readjust the chiller plant for optimal performance.

PlantPRO was named Product of the Year at the 2015 AIRAH Awards in Australia, and was awarded Energy Savings Solution Product of the Year at the 2017 Control Trends Awards in USA.

The solution is currently deployed across six continents, 20 countries and 50 cities around the world covering over 3 million square metres of building space.

Introducing PlantPRO CORE®

Like PlantPRO 2.0, PlantPRO CORE will include the ability to control chillers, pumps and cooling towers in a very wide array of plant configurations. Users will be able to monitor current plant operating conditions with PlantPRO CORE via a responsive HTML5 user interface on either desktop, mobile or tablet without the need for JAVA or similar supporting software. PlantPRO 2.0's reliable charting and alarming features will feature in PlantPRO CORE to allow end users to chart historical data effortlessly.

Conserve It is releasing PlantPRO CORE on the highly reliable edge IoT controller – CI-534 series hardware.
