

Create 'LIVE' Data Bar Graphs and Pie Charts

Use GFChart for Gravity Forms in WordPress

According to Gravity WP, GFChart is the best chart / calculation add-on for Gravity Forms out there.

Do you want to show 'Live' data from your Gravity Forms as a Bar Chart, Pie Chart, 3D Pie Chart or a Donut Chart inside your blog posts and pages? This is the way to do it.

You can easily make Bar charts (even very complex ones) from the data your website visitors filled in via Gravity Forms and the plugin GFChart. This plugin is an extension to WordPress Gravity Forms. It empowers you to showcase a visual snapshot summary of form submissions – automatically.

Gravity Forms 'Live' Charts examples Coffee drinkers' tour choice 41.5% 35.1% 15.9% Dinosaur 41.5% Etchings 15.9% Poetry 7.4% Leopard 35.1% Dinosaur 806 Etchings 309 Poetry 144 Leopard 681 Drinks choice by tour

(1) Tea Coffee No 07501,5002,2503,000 Dinosaur Etchings Leopard Poetry Number Tour Tea Coffee No Dinosaur 1,563 806 82 Etchings 314 309 31 Leopard 749 681 49 Poetry 171 144 38

Here Is How You Create Live Data Charts Choose Chart Type You can choose several Chart types to show your Gravity Forms data: Bar chart, Pie (Donut) Chart, Calculations and a Progress Bar. Per Chart Type there are more options to create, for example 3D views.

Select and filter data for your GF Chart You can select and filter (based on conditional logic) data to use and count (or sum) in your Gravity Forms Charts. No need to code it yourself, just click and generate.

Features of GFCharts Fast Front-End Analytics Gravity Forms Quickly show analytics based on Gravity Forms entries on the front-end of your website, so people can follow how many and what type of entries are submitted.

Conditional Logic Filter specific entries based on information people have filled in. This way you can easily create different kinds of charts, or calculations from one form.
