

# EHS Data announces new project with existing client, Evolution Mining.

EHS Data is proud to announce a new implementation of MonitorPro into the newly acquired operation of our existing client Evolution Mining.

Evolution Mining has evolved from a mid-tier gold producer into a global gold mining business with a reputation of sustainable excellence and outstanding environmental performance.

Embracing technology and innovation is important to the success of Evolution Mining, and the MonitorPro environmental data management solution is already active in all of their Australian operations.

The environmental monitoring and reporting at their newly acquired asset in Red Lake, Ontario, Canada has been streamlined in accordance with their environmental assurance program, with effective management and monitoring of the environmental risk across the entire organisation.

"We are proud that our MonitorPro system is highly regarded by Evolution Mining and we look forward to working with the new Canadian environmental team."

Phil Ely - Managing Director, EHS Data.

Using the latest version of MonitorPro, the environmental team will benefit from powerful satellite imagery and state-of-the-art mapping technology that will further optimise their environmental data. Combined with the EHS Data perpetual hosting option, the MonitorPro solution will assist with long term data monitoring plus the management and reporting of obligations and compliance.

Over the past 20 years, EHS Data has developed a set of innovative tools and dynamic dashboards which provide environmental teams across a variety of industries, and easy to use and highly configurable centralised source of data, eliminating the manual process of inputting data into spreadsheets.

## About Evolution Mining

Evolution Mining is a leading, growth-focused, mid-tier Australian gold miner. Evolution operates five wholly-owned mines – Cowal in New South Wales, Mt Carlton and Mt Rawdon in Queensland, Mungari in Western Australia, and Red Lake in Ontario, Canada. In addition, Evolution holds an economic interest in the Ernest Henry copper-gold mine in Queensland. In FY20 Evolution reported an underlying net profit after tax of A\$405 million. The focus of Evolution Mining is on operating its projects safely and sustainably in the community and developing them to their full potential.

## About MonitorPro

The complete, professional environmental data monitoring solution, MonitorPro is the IT solution trusted by environmental teams worldwide to manage their environmental compliance and data collection. MonitorPro is a web-based or locally hosted solution for the collation of ALL sources of environmental data, where it is generated by loggers, laboratories, weather stations, calculations, or other data repositories. MonitorPro is the first EHS Software solution to receive an MCERTS accreditation from the Environmental Agency.
