

Endace Partners with Cornet Solutions to Drive Growth in Japanese Network Security and Monitoring Market

Cornet Solutions' established track record with government and large enterprise, and complementary vendors, key reason for appointment as reseller, says Endace.

Auckland, New Zealand, Tokyo, Japan – December 10, 2019 – Endace, a world leader in high-speed network recording, playback and analytics hosting, announced today that Cornet Solutions has been appointed as a key reseller in Japan.

Since 1998, Cornet Solutions has worked with major communications equipment manufacturers, financial institutions and international communications companies.

Endace VP of Sales, APAC and Japan, Anthony Adamo says: "Partnering with Cornet Solutions gives us an experienced channel partner in Japan with deep expertise in our target market. Cornet Solutions has a long history of success in the communications and cybersecurity market, with an enviable blue-chip customer-base."

EndaceProbe Analytics Platforms™ accurately record network traffic at full line rate and provide high-performance hosting for network security and performance analytics solutions in Application Dock™, the EndaceProbe's built-in hosting environment. Hosted applications can analyze captured traffic in real time or use playback to analyze historical traffic.

"Working with Endace allows us to bring the EndaceProbe's unique network recording and analytics hosting platform to our customers here in Japan," says Hideo Matsumoto, Representative Director of Cornet Solutions. "We look forward to working with the Endace team and their market-leading EndaceProbe Analytics Platform."
