

Enjoy 3D TV with the new universal 3D glasses from LASER

3D active shutter glasses for Bluetooth or Infrared 3D TV

Sydney, Australia, September 19, 2012 – LASER Corporation, IT and consumer electronics accessories company, today unveiled its new universal 3D active shutter glasses for 3D TV – ideal for Bluetooth or Infrared 3D TVs. Compatible with a wide variety of brands and displays currently on the market, the LASER 3D active shutter glasses are truly universal. Fitting perfectly on adults and children, they are even lightweight enough to work comfortably with prescription glasses.

The LASER 3D active shutter glasses are ideal for those who own or are considering buying a 3D TV, but are concerned about the cost of additional glasses and incompatibility between different brands and specifications. Suitable for most TV / projector brands and models, the LASER 3D active shutter glasses feature LCD panel lens technology that works with the leading TV brands. Most importantly they are affordable, offering consumers the option to purchase extra pairs of 3D glasses to indulge family and friends. Everyone can now enjoy the 3D TV revolution.

Performing just like the branded version when turned on in front of the TV, the LASER 3D active shutter glasses will set itself to the right scan frequency with its unique scanning functionality. Chargeable via USB, the LASER 3D active shutter glasses feature a built-in long life lithium battery that requires only two hours to charge. The glasses can be used for up to 40 hours, even when not used for any length of time.

Supplied with a USB charge cable and its own soft carry case, the LASER 3D active shutter glasses are a versatile all-in-one alternative for lovers of the 3D experience. Available now online from www.laserco.net or through Harvey Norman in Australia – RRP inc GST: AU\$129.95.
