

# EnviroForce Provides Asbestos Testing Services Throughout Australia

EnviroForce provides industry-leading asbestos testing and inspection services across Australia.

EnviroForce is an environmental testing and consulting group that performs asbestos testing and asbestos inspection services in Australia. Our team includes scientists and consultants who are asbestos inspection experts. At EnviroForce, we are fully aware of our responsibility in the health and safety of those we impact, from workers and building occupants to our technicians who sample in the field and our analysts who handle those samples. We also understand the predicaments involved with choosing an Asbestos Consultant Agency. As such we take every necessary precautionary measure to protect every individual involved in a project and limit exposure to liability.

Asbestos is still found in some building materials imported into Australia, including insulation, flooring, textured paint, ceiling and roof tiles. Exposure to asbestos can cause serious illnesses like cancer including mesothelioma and asbestosis.

With many years of experience in this industry, our consultants understand that each individual project is unique and always has the element of urgency, thus projects must be handled according to the resources of the client. We always strive to provide the best custom designed solutions within regulatory guidelines, which meet the needs of our client in a timely and cost-effective manner without compromising the quality work.
