

EXCITING NEW TECHNOLOGY BRINGS HOPE TO AUSTRALIANS WITH LOW VISION AND BLINDNESS

We take our ability to read for granted and use this crucial skill a thousand times a day: reading, emails, documents, labels, door signs, smart phones, indicator boards... But imagine if you could not read? How would you cope in the modern world? Accessing all the information we are presented with each day is becoming increasingly challenging for people with low vision or blindness. A free seminar in Mount Waverly introduces the latest technology developments to assist these Australians who find difficulty in reading because of sight issues and learning difficulties. The seminar will include a low vision presentation followed by a display of the full range of low vision products and demonstrations, including OrCam 2.0, the world's most advanced wearable assistive device. Wireless, lightweight and about the size of a finger, OrCam MyEye 2.0's breakthrough assistive technology instantly reads printed and digital text aloud: newspapers, books, restaurant menus, signs, product labels, computer and smartphone screens. The instant face recognition improves social situations and the identification of consumer products, colors and money notes provides a refreshing level of independence. WHAT LOW VISION INFORMATION DAY- FREE WHEN Wednesday 27TH NOVEMBER 2019; 10 am – 3pm (includes low vision presentation (1 hour) followed by low vision assistive technology display WHERE Mount Waverly Youth Centre 45 Miller Cres, Mount Waverly For booking or enquiries please call: 1300 883 853 or email us at info@quantumrlv.com.au or book online <https://www.eventbrite.com.au/e/low-vision-information-day-tickets-79492912441> Media enquires Lyn Thurnham 02 4961 6010 or 0418 490 989 lthurnham@thurnhamteece.com.au Tara Fohmsbee 02 49 61 6010 or 0419 805 737 tfohmsbee@thurnhamteece.com.au Video and high res images are available at: <http://ow.ly/X78P30iigB6>
