

Revit tutorials are a great option for any architect who wants to learn to master this cutting-edge software.

Are you an architect who wants to raise the quality and creativity of your designs? Revit tutorials are a great option for any architect who wants to learn to master this cutting-edge software. Checkout 13 features that make these tutorials a worthwhile investment for any architect.

1. **Professional Instructors.** Professional instructors are essential in learning how to get the most value out of this software. Our instructors are registered architects with experience working in the field. This means you're learning from a peer in your industry. Also, you're learning from certified instructors who know how to deliver lessons in a way that's easily accessible to students.
2. **The Ability to Take a Course That Suits Your Needs.** Maybe you know a bit about the software and even have some experience using it. If so, you'll probably opt for our Intermediate level course so you can build on what you already know. Alternatively, you may want to begin with the basics of this software so you can build a solid foundation before taking what you know back to your workplace. Read the description of each course, then choose the course level that's suits your specific needs.
3. **Intensive Courses Full of Value.** These courses are short in duration, but full of pertinent, valuable material. Many architects appreciate being able to participate in an intensive course so they can benefit from the instruction while not losing out on family time or valuable time at work. A focused, information-filled course is exactly what many architects are looking for.
4. **A Limited Number of Students Per Course.** Our courses have no more than 12 students per class. A low student to instructor ratio means you get a more intimate learning experience. Ask the questions you want to ask and get points clarified right away so you can move on to learn the next important lesson with confidence. Also, the small class size makes it easier to have a class discussion and share ideas that can further clarify lessons and bring up ideas that stir up more creativity.
5. **Instruction Based on Real Projects.** What better way to learn how this software works than to base the lessons on real projects? Find out how this software contributes to and improves the intricate designs of projects you are familiar with. It's most effective to see this software at work in a practical way.
6. **A Friendly Learning Environment.** Our instructors go out of their way to establish a friendly, open environment in the classroom. After all, students learn better when they are relaxed, especially if the course is designed to be intensive.
7. **A Reputable Training Course.** Taking our course means you are participating in a course with impressive credentials. Our course belongs to the Australian Institute of Architects.
8. **Network with Colleagues in Your Field.** The ability to network with colleagues is another benefit of participating in a course with 12 or fewer students. Talk with others in your field about the coursework and exchange ideas. You may find you've made connections that last way beyond the completion of the course.
9. **Materials to Use During the Course and Beyond.** You receive a textbook with material that not only helps during the course, but after it's finished as well. So, if you'd like to go back and review some topic or lesson, you can do so to refresh your memory. Our textbook is a valuable resource to keep in your own personal library.
10. **Recommended by Your Peers.** When you look at the specifics of our course, you'll find that it comes highly recommended by other architects with the same ambitious goals as you. Our course has proven valuable to other architects working to make their designs the best they can be with the help of this software.
11. **Certified by Autodesk.** Our training center has been authorized by Autodesk. This means you're learning about this software in the most reliable way possible.

12. An Easy Registration Process. The enrollment process is a relatively quick and easy one. We need to know when you'd like to take your course and the preferred location along with your contact and payment information. We are available and happy to answer any questions you have about our courses, instructors, materials and more.

13. Proof of Completion of the Course. Once you're finished with the course, you receive a certificate indicating you participated. This is something you can show to your current employer or carry along with you throughout your career to prove your knowledge of this software.

Finally, taking our course brings you a step closer to achieving the goals you have in the field of architecture.
