

Genetec Partners with BlackBerry Cylance to include AI-based antivirus in its appliance portfolio

Company to integrate CylancePROTECT into Streamvault appliances

Sydney, Australia July 18, 2019—Genetec Inc. (“Genetec”), a leading technology provider of unified security, public safety, operations, and business intelligence solutions, today announced that it is partnering with Cylance, a business unit of BlackBerry, Limited (NYSE:BB; TSX:BB), to bring AI-based antivirus protection to its appliances customers. Through this partnership, Genetec will offer additional cyber security protection to its Streamvault™ family of infrastructure solutions by including CylancePROTECT out-of-the-box at no additional cost to its customers. Genetec Streamvault™ all-in-one and rackmount appliances, storage, and workstations are expected to be shipped pre-installed and optimised with CylancePROTECT in September 2019. “Genetec is committed to creating secure solutions from the ground up and have practices in place to help identify and mitigate risk for our customers. Cyber security is at the core of our development process and we see that cyberthreats are evolving faster than ever. With CylancePROTECT, Genetec is delivering the latest in prevention-first, predictive security technology to Streamvault customers and providing them with up-to-date protection, without compromising appliances guaranteed performance,” said Francis Lachance, Director, Video and Appliances at Genetec. CylancePROTECT protects endpoints and organisations from compromise by combining the power of artificial intelligence to block malware infections with additional security controls that safeguard against script-based, file-less memory, and external device-based attacks. Unlike traditional endpoint security products that rely on signatures and behavior analysis to detect threats in the environment, CylancePROTECT uses machine learning, not signatures, to identify and block known and unknown malware from running on endpoints. The software delivers prevention against common and unknown (zero-day) threats without an internet connection. It continuously protects an endpoint without disrupting the end-user and provides minimal impact on system resources. “For years, traditional antivirus prevention products relied on signatures as their primary threat protection method. Assuming all attacks on a business had been seen before, using signatures made sense. However, today, malware mutates daily, even hourly, making signature-based prevention tools obsolete. In mission-critical industries, such as the physical security industry, organisations need to think beyond traditional antivirus. We are pleased to partner with Genetec as we share the same passion for protecting our customers against cyber-attacks,” said Steve Rossi, Global Director of OEM sales at Cylance. Because it uses very little computing power, CylancePROTECT will not affect the smooth running of Genetec appliances, allowing customers to benefit from proactive threat detection without monopolising crucial resources. In addition, with no Internet connection or signature updates required, CylancePROTECT will protect remote endpoints connected to the Genetec system. About Genetec Genetec Inc. is an innovative technology company with a broad solutions portfolio that encompasses security, intelligence, and operations. The company’s flagship product, Security Center, is an open-architecture platform that unifies IP-based video surveillance, access control, automatic license plate recognition (ANPR), communications, and analytics. Genetec also develops cloud-based solutions and services designed to improve security, and contribute new levels of operational intelligence for governments, enterprises, transport, and the communities in which we live. Founded in 1997, and headquartered in Montreal, Canada, Genetec serves its global customers via an extensive network of resellers, integrators, certified channel partners, and consultants in over 80 countries.
