

Gigamon partners with Riverbed to radically simplify hybrid cloud deployment, monitoring and management

Gigamon Hawk integrates with Riverbed to address the complexity of embracing hybrid and private clouds alongside on-premises environments

SYDNEY – April 16, 2021 – Gigamon, the cloud leader in visibility and analytics, today announced a partnership with Riverbed, the leader in performance and visibility of networks and applications, in support of the recent Gigamon Hawk launch.

Hawk is the industry's first elastic visibility and analytics fabric for all data-in-motion across the hybrid cloud.

An intuitive, data-driven network traffic visibility solution, Gigamon Hawk optimises traffic collection across cloud platforms, dramatically reduces manual steps required to manage evolving workloads, and provides both on-premises and cloud tools with contextualised network information otherwise not possible.

With this partnership, mutual customers can leverage Riverbed's leading network performance management (NPM) solutions to deliver unified packet, flow, and device visibility across branch offices, data centers, hybrid and multi-cloud environments to optimise network and application troubleshooting.

In addition, Riverbed's Unified NPM solutions provide visibility to identify cyber threats and help IT to diagnose and respond quickly to a full range of attacks so that enterprises can rely on fast, secure connectivity to the resources they depend on to run the business.

Infrastructure complexity has grown exponentially with the acceleration of digital transformation, and this complexity has led to a deficiency in digital infrastructure and a foundational visibility gap across the underlying hybrid cloud.

As technology partners, Gigamon and Riverbed collectively provide a solution for hybrid and multi-cloud networks that addresses both the complexity and performance challenges of the modern digital enterprise.

"We recognise the challenges and security risks that result from an organisation's digital transformation journey," said Judy Mirkin, Vice President of Strategic Alliances at Riverbed. "Gigamon Hawk and Riverbed Unified NPM solutions together provide the aid needed to deliver the critical visibility and insights into the health and security of on-prem and multi-cloud infrastructures."

"Working with world-class partners, such as Riverbed, we are able to deliver the mission-critical visibility needed to simplify and secure even the most complex hybrid cloud networks," said Larissa Crandall, Vice President, Worldwide Channels and Alliances at Gigamon.

"By providing a unified view across their entire network, through a single interface with built-in management and reporting, together we enable our customers to deliver the high-quality and secure experience their users demand."

About Riverbed

Riverbed enables organisations to maximise performance and visibility for networks and applications, so they can overcome complexity and fully capitalise on their digital and cloud investments. The Riverbed Network and Application Performance Platform enables organisations to visualise, optimise, remediate and accelerate the performance of any network for any application, and helps to identify and mitigate cybersecurity threats. The platform addresses performance and visibility holistically with best-in-class WAN optimisation, unified network performance management (NPM), application acceleration (including Office 365, SaaS, client and cloud acceleration), and enterprise-grade SD-WAN. Riverbed's 30,000+ customers include 99% of the Fortune 100. Learn more at www.riverbed.com

About Gigamon

Gigamon helps the world's leading organisations run fast, stay secure and innovate. We provide the industry's first elastic visibility and analytics fabric, which closes the cloud visibility gap by enabling cloud tools to see the network and network tools to see the cloud. With visibility across their entire hybrid cloud network, organisations can improve customer experience, eliminate security blind spots, and reduce cost and complexity. Gigamon has been awarded over 75 technology patents and enjoys world-class customer satisfaction with more than 4,000 organisations, including over 80 percent of the Fortune 100 and hundreds of government and educational organisations worldwide. Headquartered in Silicon Valley, Gigamon operates globally. For the full story on how Gigamon can help you to run fast, stay secure and innovate, please visit www.gigamon.com and follow us on Twitter @gigamon.
