

## iCloud's Unlimited Backup for \$20.00/year: A Great Alternative to Apple iCloud Service

iCloud Unlimited Storage and Apple 15GB Storage exact same price

Apple Inc.'s MobileMe customers that were using more than 5GB storage and didn't purchase additional GB's or select an alternative cloud storage service have already witnessed that the "downgrade" put their most important data at risk. At iCloud Inc., we received many of your calls made to us in error with pleas for help.

Apple MobileMe customers were initially incented with a temporary 20G of storage to assist with the transition from their MobileMe service to Apple iCloud service. If you exceeded your free 5 GB storage, a deadline was given to purchase additional cloud storage that would cancel the downgrade. The cost for Apple iCloud service and amount to be paid for retaining the space that was previously given for free was made available based on the amount of storage space needed:

10 additional GB (15 GB total): \$20/year  
20 additional GB (25 GB total): \$40/year  
50 additional GB (55 GB total): \$100/year  
For cloud users that are looking for more storage space, there is an impressive alternative iCloud service available with unlimited storage and it's only \$20/year! While Apple iCloud users pay \$20/year for 15 GB storage, iCloud iCloudDrive Backup users benefit from unlimited storage space. And what's more, you gain a lot more freedom including:

Limitless storage with no bandwidth restrictions for all your files online whether it's your music or video library, photos or documents. No limitations set on the number of computers you backup and it works with all Windows and Mac PC's. Access to your content on-the-go over any digital mobile device including iPhone, iPad, Blackberry, Android, Winphone 8, Nokia, TouchPad and beyond.

Choosing iCloudDrive as your method of cloud access and way to manage all your information provides an exceptional balance of automatic storage, redundancy and value. iCloud's iCloudDrive services are not limited to Apple customers, they are available for anyone looking for a cloud service. In addition to the unlimited plan, iCloud provides a portfolio of cloud service plans that come with enormous terabyte storage space combined with feature rich sharing and collaboration features that attract both the consumer and enterprise markets. There's no question cloud providers bring great value and today consumers have options available to find the plan that best meets their needs. If you have aren't sure exactly how much space you might need and want to ensure on-the-go access and reliable offsite backup to safeguard all your information, iCloudDrive Backup is a flexible and truly unlimited service that accommodates you as your information grows today and into the future.
