

Introducing Critical Control Management (CCM)

Critical Risks, Controls and Verification

We are very excited to launch a new and novel technology that has a significant impact on operations. Our Critical Control Management (CCM) module is for High Risk Industries that demand foolproof Control Performance.

CCM drives integrated action when controls are compromised. The module:

- Records Critical Risks, Controls and Performance Standards

- Uses Smart Inspections™ to activate automated processes

- The powerful Rules Engine™ drives critical actions when controls are compromised

- Analyse risks and controls in the Performance Dashboard

You can also Join us for a free webinar - A Configuration Case Study with Mitchell Services

April 22 @ 11:30am AEST

Presented by Josh Bryant (Mitchell Services General Manager, People and Risk) and Adrian Manassis (Business Development, myosh). Mitchell Services Limited is a leading provider of drilling services to the global exploration, mining and energy industries.

What's covered?

- Critical Risks, their methodology and the issues at hand

- Critical controls and conformance standards

- Smart Inspections™, control effectiveness and performance reports

Adrian Manassis from myosh will then demonstrate how Smart Inspections™ and the Rules Engine are used to manage Critical Control Effectiveness, status and reporting
