

iSolutions Expands Asset Management Software Development Team with Offshore Capability

Development capability has been significantly boosted to focus on new technologies and asset management apps for iPhone and Android devices.

To boost development capacity, iSolutions has expanded its team by adding 18 full-time developers in Vietnam. The core asset management software development team in Sydney will remain in place, with the addition of a new business analyst.

The expansion comes after a successful three month trial with an initial team of 8.

Darryl Smith, iSolutions CIO comments, "Over the last 18 months we have spent a lot of time modifying the back end of AMT to enable us to deploy apps. Our new off-shore capability will allow us to rapidly develop and deploy new apps and modules to meet our customers' needs."

The new development team provide additional capability as iSolutions is set to significantly enhance AMT over the next 12 months. "Technology is changing rapidly and this enables us to keep the product current." Darryl commented. The first apps being developed are Inspections (perform inspections and record defects), Timesheets (capture and confirm employee timesheets), Workbench (view and record usages, measurements), Customers (view market share and sales opportunities & update component schedule), Fleet Statistics (view and update asset statistics).

The apps will work on all modern mobile devices – iPad, iPhone, Android phones & tablets, Windows Phone – as well as common desktop browsers (eg. Chrome, Firefox, IE).
