

# iUFlow Finalist in the Best Affordable New Technologies in Urology award

Kesem Health – Finalist in the Best Affordable New Technologies in Urology awarded at the 38th Congress of The Société Internationale D'urologie Seoul, Korea (SIU 2018)

Kesem Health is honoured to be a finalist in the Best Affordable New Technologies in Urology competition sponsored by Prof. Daniel Yachia. This competition is part of the Symposium on Affordable New Technologies in Urology (SANTU). Prof Yachia's aim for SANTU is to induce creative minds to create new devices and surgical techniques which will be affordable to the inhabitants of low-income countries and to help the billions of such people receive an acceptable level of treatment.

The Best Affordable New Technologies in Urology-2018 is open to innovative ideas for low-cost devices and technologies that can be used in urology. "I personally think that innovations in low income countries should mainly be driven by people on the ground in the countries where they are needed. However, in addition to them, other creative minds from developed countries can also submit affordable urology related device projects aimed at people who live many miles away from them," says Prof Yachia, who personally sponsors the competition.

Kesem Health developed and is commercialising the iUFlow™ solution to improve, simplify, and reduce the cost of the diagnosis and management of Lower Urinary Tract diseases including Benign Prostatic Hyperplasia (BPH), Overactive Bladder (OAB), and Nocturia.
