

Nanjing Airport selects RapidFIDS

Flight Information Display System

Nanjing Lukou International Airport (NKG) in Nanjing, China capital of Jiangsu province, has selected Intersystems to integrate FIDS into their new terminal to drive in excess of 500 FIDS displays.

The contract provides the airport with the world-renowned Intersystems RapidFIDS Flight Information Display Solution providing them with a seamless end-user experience. When completed, real-time flight data will be available to passengers in multiple languages to ensure smooth journeys all-round. "The project is on track," commented Simon Fu, Intersystems Asia Operations Manager, "it's anticipated that the system will be ready for testing by the end of the month."

Intersystems delivery of RapidFIDS is projected to be completed by the end of 2013 with the new terminal set to open in mid 2014.

Nanjing is the third airport project Intersystems has undertaken in China this year.

Bruce Allen, CEO of Intersystems commented, "we've only just begun our journey in China. Our recently approved business status for Intersystems China Limited will only broaden our ability to service the market and is perfectly timed to drive further growth."
