

Natural Relief for Symptomatic Muscle and Joint Aches

Relievamed® is a natural plant-based formula containing ingredients specifically formulated to provide relief of muscle and joint issues based on scientific and clinical evidence.

Proudly Australian Made and Owned Contains no harsh chemicals or drugs Starts working instantly Specifically formulated to help with:
Joint tension Arthritic joints Sports activities Lower back issues Overuse of muscles and joints Dr. Donna Marcal, PhD is the driving force behind Relievamed (by Sentryca Pty Ltd) and the research behind its products. She is passionate about developing high quality products that are packed with natural (scientifically-based) anti-inflammatory ingredients that help people find relief.

Contains a unique combination of highly anti-inflammatory ingredients: Curcuma xanthorrhiza (exclusive to Relievamed) Boswellia serrata Comfrey Rosemary Capsicum frutescens and more "We have had many people come back to us thankful and with rave reviews about our products. Even those that are skeptical about natural products. We have frequently had people use our product themselves then come back and order multiple tubes of our Relievamed cream because they want to share it with their friends."

"I use this product daily at my Physiotherapy clinic. My clients like it as it is Australian made and uses natural ingredients." Allison at Byford Physiotherapy

"Oh I absolutely love this product. I have been using it daily for a couple of weeks now and have found it very helpful. I have been using it on my neck and it rubs right in without leaving you slimy or stinky and almost immediately helps with relieving the aches and pain." Kirsty via Facebook Review

"I have been using this product for about 2 weeks now and am really impressed with it. It isn't 'hot' or 'greasy' which means I can rub it on and go!! Well done on such a great product." Amy via Facebook Review

About Dr Donna Marcal:

Dr Donna Lee Marcal completed her PhD in Biochemistry while training and working as a Medical Laboratory Technologist. Her extensive research on inflammation and how the body reacts to foreign materials resulted in her being awarded 2 different international research fellowships at the University of New South Wales in Sydney, Australia.

Her continued work on the proteomics investigated how changes in protein profiles occur and are influenced by various micro-environments that can cause inflammation in the human body. She was awarded her doctorate in 2007 and continued her advanced work at the Australian Institute of Bioengineering and Nanotechnology (Brisbane, QLD). She was then further awarded a post-doctoral research fellowship to continue her work in inflammation related to Atherosclerosis at UNSW.

Relievamed is available through selected physiotherapy clinics and pharmacies across Australia or online at www.relievamed.com
