

## New hygienic, accurate temperature measurements for medical professionals

*Strategy.  
Action.  
Results.*

Compact clinical forehead thermometer provides readings in two seconds

With health practitioners having to adapt to significant changes in how they provide care, carrying a thermometer is now an essential device for every medical professional.

The MedSense DT-060 infrared, non-contact forehead thermometer has been clinically validated for accuracy and is one of the most compact and lightweight thermometers available. It provides a fast temperature reading in just two seconds

Weighing just 39 grams, the lightweight MedSense DT-060 easily slips into a pocket and is compact enough to carry around whilst on duty. Not only does its plastic storage box protect it from moisture, dust and any potential damage to the sensor probe, it is also a handy carrying case.

Medical professionals will appreciate its energy saving design as it automatically shuts itself off after 20 seconds of inactivity to conserve battery life. The MedSense DT-060 is small enough to fit into first aid kits, whether at work, school or home, and easily fits into the car glovebox for use whenever it's needed.

An audio alert from the thermometer notifies users if a high body temperature is detected. However, this audio feature can be silenced if desired, such as not wanting to wake a sleeping patient.

The MedSense DT-060 professional thermometer is a Class IIa medical device and is entered in the ARTG and also with CE and FDA. TGA ARTG No. 336050. It has a two-year warranty and is available from Andatech Distribution for \$149.00.
