

PIVOT™ by Spectralink achieves Google™ Mobile Services certification

AIMS partners to provide specialised workflow applications on PIVOT WorkSmart Mobile Handsets

February 12, 2015 – Spectralink Corporation, a global leader in purpose-built wireless communications solutions for the workplace, has announced PIVOT™ by Spectralink, a WorkSmart solution, has been certified for Google™ Mobile Services and is now available with the Android™ 4.4.2 KitKat® operating system.

Spectralink AIMS partners (Application Integration and Management Solvers) work with Spectralink to deliver specialised vertical, workplace-specific applications to customers. AIMS partners whose solutions rely on Google™ Cloud Messaging can now deploy their applications on PIVOT. The first set of applications to be offered via AIMS partners include secure text messaging, notifications, alarms and alerts.

Google Mobile Services certification allows PIVOT access to Google Cloud Messaging as well as all other Google Mobile Services such as Google Play™ store and Google™ search. PIVOT's purpose-built for work platform with Google Mobile Services enables businesses to fully tap into the productivity enhancing power of Android mobile devices in the workplace.

"The Google Mobile Services certification for Spectralink is an exciting development for PIVOT," said Jim Cikanek, Senior Mobile Product Manager with Spok, Inc., a member of Spectralink's AIMS partner network. "Now the secure texting applications that Spok offers which leverage Google Cloud Messaging can be paired with PIVOT, a winning combination."

"Spectralink continues to develop its purpose-built devices to solve the unique problems enterprises face with effective communication every day," said Sten Dyrmoose, CEO of Spectralink. "This spirit of innovation is in every Spectralink mobile device, and is designed to empower workers to be more efficient and productive whether through talk, workflow or notifications and alerts. With Google Mobile Services, our AIMS partners can offer enterprises more choice in how they enable their workers to communicate and improve the performance of the entire business."

Spectralink works with its exclusive AIMS network, comprised of 37 partners and growing. AIMS partner solutions have been evaluated by Spectralink to give customers the confidence that the applications developed will interoperate with Spectralink solutions. Spectralink's open platform allows application developers the flexibility to customise solutions for their customers to deliver improved workflow processes.

In partnership with the Spectralink applications development ecosystem, PIVOT enables new opportunities for end-user productivity with WorkSmart solutions. In addition to Google Mobile Services Applications and Android operating systems, PIVOT now includes Bluetooth support for mobile point of sale (mPoS) peripherals, an optional, high-performance 1D/2D integrated barcode scanner, an industrial-grade accelerometer and superior design quality to resist to dust and liquids, including cleaning agents.
